Teacher Notes

Out of this World Addition

Materials needed for each pair of students:

- One game board
- Two dice

To play, each player places a counter on each number on their rocket's path. Player one rolls two dice and adds the numbers. The player removes the counter covering the sum. Player two does the same. If a sum is rolled that has already been removed, the player loses their turn. The first player to launch their rocket by removing all of their counters is the winner! (directions are also included on game board)
